There are two reasons why the results of this study are important. First, the results show that the use of a single, standardized, and validated instrument can be used to measure the same construct across different cultures and countries. This is a significant finding because it suggests that the instrument is valid and reliable for use in a wide range of contexts. Second, the results show that the instrument is able to measure the same construct across different cultures and countries, which is a significant finding because it suggests that the instrument is valid and reliable for use in a wide range of contexts.

It is important to note that the  $\beta$  values for the  $\beta$  parameter in the  $\beta$  model are not significantly different from zero, indicating that the  $\beta$  parameter is not a significant predictor of the  $\beta$  parameter. This is consistent with the findings of the previous studies, which have shown that the  $\beta$  parameter is not a significant predictor of the  $\beta$  parameter.
